**Hubungan Kepatuhan Perawat Dalam Pemasangan Tanda Risiko Jatuh Dengan
Keamanan Dan Keselamatan Pasien Di Instalasi Gawat Darurat RSUD Waled
Kabupaten Cirebon Tahun 2023**

xiv + 40 + 9 tabel + 2 bagan + 21 lampiran

ABSTRAK

Kepatuhan pemasangan tanda risiko jatuh merupakan salah satu bentuk penilaian mutu, di mulai pasien datang melakukan pendaftaran, pemeriksaan, hingga pasien pulang, adapun pemasangannya seperti segi tiga warna kuning atau gelang pasien klip warna kuning. Beberapa faktor yang mempengaruhi pasien risiko jatuh seperti kondisi pasien, lingkungan rumah sakit, konsumsi obat dan alkohol, serta umur pasien, penelitian ini dilakukan untuk mengetahui hubungan kepatuhan perawat dalam pemasangan tanda risiko jatuh dengan keamanan dan keselamatan pasien di IGD RSUD Waled Kabupaten Cirebon, penelitian ini menggunakan total sampling semua perawat IGD RSUD Waled dengan instrumen penelitian berupa lembar kuesioner dan lembar observasi, analisa data di olah berupa analisa univariat dan analisa bivariat menggunakan pembuktian uji chi-square

Hasil penelitian analisa univariat pada distribusi frekuensi berdasarkan kepatuhan perawat adalah perawat patuh 52.18%, perawat tidak patuh 47.82%, sedangkan distribusi frekuensi berdasarkan keamanan dan keselamatan adalah aman dan selamat 52.18%, tidak aman dan tidak selamat 47.82%, sedangkan analisa bivariat menggunakan pembuktian uji chi-square di dapat nilai p.value 0.000 berarti ada hubungan kepatuhan perawat dalam pemasangan tanda risiko jatuh dengan keamanan dan keselamatan pasien di IGD RSUD Waled Kabupaten Cirebon.

Meningkatkan kepatuhan perawat pemasangan tanda risiko jatuh, meningkatkan kinerja bagi perawat dan peneliti.

Kata Kunci : Kepatuhan, keamanan dan keselamatan pemasangan tanda risiko jatuh

**Relationship Between Nurse Compliance In Installation Of Fall Risk Signs
With Patient Safety And Safety At The Emergency Installation Waled
Hospital Cirebon District In 2023**

xiv +40 + 9 tables + 2 scheme + 21 enclosure

ABSTRACT

Compliance with the installation of fall risk signs is a form of quality assessment from the Waled Regional General Hospital, Cirebon Regency, starting with the patient coming to register, check up, until the patient returns, while the installation is like a yellow triangle or a yellow patient clip bracelet. Several factors influence the patient's risk of falling such as the patient's condition, hospital environment, drug and alcohol consumption, and the patient's age. This study used a total sampling of all nurses in the Emergency Room at Waled Hospital with research instruments in the form of questionnaires and observation sheets, data analysis was processed in the form of univariate analysis and bivariate analysis using the chi-square test.

The results of the univariate analysis on the frequency distribution based on nurse compliance were 52.18% obedient nurses, 47.82% non-compliant nurses, while the frequency distribution based on security and safety was 52.18% safe and safe, 47.82% unsafe and unsafe, while bivariate analysis used test evidence chi-square with a p.value of 0.000 means that there is a relationship between nurse adherence in placing fall risk signs and patient safety in the IGD of Waled Hospital, Cirebon Regency.

Research increases nurse compliance with fall risk signs, improves performance for nurses and researchers.

Keywords : Compliance, security and safety in installing fall risk signs
