**Hubungan Tingkat Pengetahuan Tentang Patient Safety Dengan Kepatuhan  
Dalam Menerapkan *Surgical Safety Checklist* (SSC) Di Kamar Operasi RS  
Mitra Plumbon Indramayu**

xvii + 41 halaman + 4 tabel + 2 bagan + 12 lampiran

**ABSTRAK**

**Latar Belakang:** *Surgical Safety Checklist* (SSC) digunakan di kamar operasi untuk meningkatkan keamanan operasi dan mengurangi kesalahan dalam prosedur pembedahan. Rendahnya tingkat kepatuhan pengisian SSC berpotensi menimbulkan masalah terkait keselamatan pasien yang dipengaruhi oleh pengetahuan terkait *patient safety*. Tujuan dari penelitian ini adalah untuk menganalisis hubungan tingkat pengetahuan *patient safety* dengan kepatuhan dalam menerapkan *Surgical Safety Checklist* (SSC).

**Metode:** Desain penelitian ini adalah kuantitatif korelasional dengan pendekatan *cross sectional* dan metode analitik observasional. Populasi adalah semua perawat di ruang kamar operasi RS Mitra Plumbon Indramayu yang berjumlah 15 perawat. Sampel perawat di ruang kamar operasi berjumlah 15 responden. Teknik sampel yaitu *non probability sampling* dengan pendekatan *total sampling*. Instrumen yang digunakan yaitu kuesioner pengetahuan *patient safety* dan ceklis tindakan operasi (*Surgical Safety Checklist*). Uji statistik yang digunakan dalam penelitian ini adalah perhitungan uji *Mann Whitney*.

**Hasil:** Hasil penelitian menunjukkan terdapat 7 responden (46,7%) memiliki pengetahuan *patient safety* kategori baik, dan 11 responden (66,7%) memiliki kepatuhan dalam menerapkan SSC kategori patuh. Hasil analisis menggunakan perhitungan korelasi uji *Mann Whitney* menunjukkan nilai *p value* = 0,003.

**Kesimpulan:** Berdasarkan hasil penelitian disimpulkan bahwa terdapat hubungan yang signifikan antara tingkat pengetahuan *patient safety* dengan kepatuhan dalam menerapkan SSC (*surgical safety checklist*) di ruang kamar operasi.

Kata Kunci : Pengetahuan, *Patient Safety*, Kepatuhan, *Surgical Safety Checklist*

***Correlation between Patient Safety Knowledge Level and Compliance with the Implementation of SSC (Surgical Safety Checklist) in the Operation Room of Mitra Plumbon Indramayu***

*xvii + 41 + 4 tables + 12 enclosure*

**ABSTRAK**

**Background:** *Surgical Safety Checklist (SSC) is used in the operating room to increase the safety of surgery and reduce errors in surgical procedures. The low level of compliance in filling out the SSC has the potential to cause problems related to patient safety which are influenced by knowledge related to patient safety. This study aims to examine the correlation between the level of knowledge of patient safety with nurse compliance in the application of filling the Surgical Safety Checklist (SSC).*

**Method:** *Research design was correlational quantitative with cross sectional approach and analytic observational method. Population was all nurses in operating room which amounts to 15 nurses. The sample of nurses in the operating room was 15 respondents. The sampling technique was non-probability sampling with a total sampling approach. The instruments used were a patient safety knowledge questionnaire and a surgical safety checklist. The statistical test used in this study was the calculation of Mann Whitney.*

**Results:** *The results of the research indicated 7 respondents (46.7%) had knowledge about patient safety in good category, while 11 respondents (66.7%) had compliance in the application of SSC. The results of the analysis using Mann Whitney the correlation calculation indicated p value = 0.003.*

**Conclusion:** *Based on the results of the study, it is concluded that there is a significant correlation between the level of knowledge of patient safety and nurse compliance in the application of SSC (surgical safety checklist) in the operating room of Mitra Plumbon Indramayu.*
