**HUBUNGAN KETERSEDIAAN SARANA CUCI TANGAN DENGAN PERILAKU
MENCUCI TANGAN PAKAI SABUN DI SDN PEKALANGAN KOTA CIREBON**

ix + 49 + 4 tabel + 2 bagan + 12 lampiran

ABSTRAK

Sarana cuci tangan merupakan fasilitas untuk menjaga kebersihan diri dan melatih kebiasaan cuci tangan pakai sabun dan air yang mengalir. Keberadaan sarana CTPS akan mempermudah kepatuhan CTPS di kalangan peserta didik demi mencegah kejadian diare, infeksi pernafasan, penyakit mata, dan infeksi kulit. Sekolah sebagai tempat berkumpulnya banyak siswa menjadi lingkungan yang rentan terhadap penularan penyakit, terutama yang disebabkan oleh kontaminasi tangan. Tujuan dalam penelitian ini adalah untuk mengetahui Hubungan Ketersediaan Sarana Cuci Tangan Dengan Perilaku Mencuci Tangan Pakai Sabun Di SDN Pekalangan Kota Cirebon.

Jenis penelitian ini bersifat *kuantitatif* dengan menggunakan pendekatan *cross sectional*. Populasi dari penelitian ini yaitu seluruh siswa kelas 4 dan 5 SDN sebanyak 41 siswa. Teknik sampling yang digunakan adalah total sampling. Data akan di analisis secara *univariat* dan *bivariat* dan analisis menggunakan uji *chi square*.

Hasil penelitian menunjukkan bahwa ketersediaan dari sarana cuci tangan di SDN Pekalangan dalam kategori tersedia yaitu sebanyak 31 responden (75,6%). Sementara itu, perilaku cuci tangan pakai sabun dengan kategori baik yaitu sebanyak 28 responden (68,3%). Kedua variabel saling berhubungan dengan dibuktikan nilai *p value* = (0,049) < nilai α (0,05) yang berarti H_0 ditolak dan menyatakan bahwa terdapat suatu hubungan yang signifikan antara Hubungan Ketersediaan Sarana Cuci Tangan Dengan Perilaku Mencuci Tangan Pakai Sabun Di SDN Pekalangan Kota Cirebon.

Diharapkan kepada pihak instansi agar lebih memperhatikan ketersediaan sarana penunjang CTPS seperti sabun dan *tissue*, terkait pentingnya perilaku mencuci tangan pakai sabun dengan benar.

Kata kunci : Sarana cuci tangan, perilaku cuci tangan pakai sabun, anak SD

***RELATIONSHIP BETWEEN THE AVAILABILITY OF HAND WASHING
FACILITIES AND THE BEHAVIOR OF WASHING HANDS WITH SOAP AT SDN
PEKALANGAN, CIREBON CITY***

ix + 49 + 4 tables + 2 charts + 12 attachments

ABSTRACT

Hand washing facilities are facilities to maintain personal hygiene and train the habit of washing hands with soap and running water. The existence of CTPS facilities will facilitate CTPS compliance among students in order to prevent diarrhea, respiratory infections, eye diseases, and skin infections. Schools as a place where many students gather are environments that are vulnerable to disease transmission, especially those caused by hand contamination. The purpose of this study was to determine the Relationship between the Availability of Hand Washing Facilities and Hand Washing Behavior with Soap at SDN Pekalangan, Cirebon City.

This type of research is quantitative using a cross-sectional approach. The population of this study were all 4th and 5th grade students of SDN, totaling 41 students. The sampling technique used was total sampling. The data will be analyzed univariately and bivariately and analyzed using the chi square test.

The results showed that the availability of hand washing facilities at SDN Pekalangan in the available category was 31 respondents (75.6%). Meanwhile, hand washing behavior with soap in the good category was 28 respondents (68.3%). Both variables are interrelated as evidenced by the p value = (0.049) $< \alpha$ value (0.05) which means H_0 is rejected and states that there is a significant relationship between the Relationship between the Availability of Handwashing Facilities and Handwashing Behavior with Soap at SDN Pekalangan, Cirebon City.

It is hoped that the agency will pay more attention to the availability of CTPS supporting facilities such as soap and tissue, related to the importance of proper handwashing behavior with soap.

Keywords: Handwashing facilities, handwashing behavior with soap, elementary school children
