ABSTRAK

Kunjungan Lansia ke Posbindu merupakan Partisipasi lansia dalam mengikuti kegiatan posbindu dalam 1 tahun terakhir, diukur dengan melihat data kunjungan lansia di buku register. Status kesehatan lansia menjadi indikator penting kualitas derajat kesehatan lansia yang produktif dan berdaya guna di masyarakat. Penelitian ini bertujuan menganalisis hubungan kunjungan dan status kesehatan lansia. Metode Penelitian ini menggunakan jenis penelitian kuantitatif dengan rancangan pendekatan *Cross Sectional*. Instrumen yang digunakan yaitu lembar Kuesioner dan Buku Register kunjungan lansia ke posbindu. Populasi yaitu seluruh Lansia di Posbindu Salak Kota Cirebon Tahun 2024. Teknik pengambilan sampel pada penelitian ini menggunakan *Purposive sampling* dengan jumlah sampel 85 orang. Data yang digunakan adalah data primer dan data sekunder. Hasil penelitian didapatkan kunjungan lansia ke Posbindu diperoleh sebanyak 55 responden (64.7%) dalam kategori tidak sering berkunjung dan status kesehatan lansia diperoleh sebanyak 40 responden (47.1%) dalam kategori status kesehatan lansianya kurang baik. Hasil uji statistik menggunakan uji *chi-square* diperoleh *p value* = 0,000 ($p < 0,05$). Artinya H_0 ditolak dan H_a diterima menunjukkan adanya hubungan yang signifikan antara kunjungan lansia ke posbindu dengan status kesehatan lansia di Posbindu Salak Kelurahan Karyamulya Kota Cirebon.

ABSTRACT

Elderly Visits to Posbindu is the participation of the elderly in participating in Posbindu activities in the last 1 year, measured by looking at the elderly visit data in the register book. The health status of the elderly is an important indicator of the quality of the health status of the elderly who are productive and useful in the community. This study aims to analyze the relationship between visits and the health status of the elderly. This research method uses a quantitative research type with a Cross Sectional approach design. The instruments used are Questionnaire sheets and Register Books of elderly visits to Posbindu. The population is all elderly at Posbindu Salak Cirebon City in 2024. The sampling technique in this study used Purposive sampling with a sample size of 85 people. The data used are primary data and secondary data. The results of the study showed that elderly visits to Posbindu were obtained by 55 respondents (64.7%) in the category of not visiting frequently and the health status of the elderly was obtained by 40 respondents (47.1%) in the category of poor elderly health status. The results of statistical tests using the chi-square test obtained p value = 0.000 ($p < 0.05$). This means that H_0 is rejected and H_a is accepted, indicating that there is a significant relationship between elderly visits to the Posbindu and the health status of the elderly at the Salak Posbindu, Karyamulya Village, Cirebon City.
