**ASUHAN KEBIDANAN KOMPREHENSIF PADA NY "R" DI UPT
PUSKESMAS GEBANG KABUPATEN CIREBON TAHUN 2025**

CXXIX halaman + 2 tabel +10 gambar + 13 lampiran

ABSTRAK

Asuhan kebidanan komprehensif merupakan pelayanan berkelanjutan mencakup kehamilan, persalinan, nifas, bayi baru lahir, hingga keluarga berencana. Tujuan laporan ini adalah memberikan asuhan kebidanan pada Ny. R, 27 tahun, G2P1A0, usia kehamilan 37-38 minggu, di Puskesmas Gebang Kabupaten Cirebon selama Februari–Mei 2025.

Metode yang digunakan adalah studi kasus dengan pendekatan continuity of care. Data dikumpulkan melalui wawancara, observasi, pemeriksaan fisik, dan dokumentasi SOAP.

Hasil asuhan selama kehamilan menunjukkan kondisi ibu dan janin dalam batas normal. Persalinan berlangsung spontan pada 17 Maret 2025 pukul 07.20 WIB dengan lahir bayi laki-laki, berat 3300 gram, panjang 53 cm, menangis kuat, dan dilakukan Inisiasi Menyusu Dini (IMD). Pada masa nifas kondisi ibu dan bayi baik serta tidak ada tanda bahaya nifas. Ibu memilih KB suntik 3 bulan.

Asuhan yang diberikan sesuai standar kebidanan dan menunjukkan hasil optimal. Laporan ini diharapkan menjadi acuan bagi tenaga kesehatan dalam memberikan pelayanan kebidanan berkelanjutan.

***COMPREHENSIVE MIDWIFERY CARE FOR MRS. "R" AT THE UPT
GEBANG PUBLIC HEALTH CENTER CIREBON REGENCY IN 2025***

CXXIX pages +2 tables + 4 pictures + 8 attachments

ABSTRACT

Comprehensive midwifery care is a continuous service covering pregnancy, childbirth, postpartum, newborn care, and family planning. The purpose of this report is to provide midwifery care to Mrs. R, 27 years old, G2P1A0, 37-38 weeks gestation, at the Gebang Community Health Center in Cirebon Regency during February–May 2025.

The method used was a case study with a continuity of care approach. Data were collected through interviews, observations, physical examinations, and SOAP documentation. The results of care during pregnancy indicated that the condition of the mother and fetus was within normal limits. Delivery occurred spontaneously on March 17, 2025, at 7:20 a.m. Western Indonesian Time (WIB). A baby boy was born, weighing 3300 grams, 53 cm long, with a strong cry, and Early Initiation of Breastfeeding (IMD). During the postpartum period, the condition of the mother and baby was good, and there were no postpartum danger signs. The mother chose a 3-monthly contraceptive injection.

The care provided was in accordance with midwifery standards and demonstrated optimal results. This report is expected to serve as a reference for healthcare professionals in providing continuous midwifery care.
