**ABSTRAK**

Di era digitalisasi pelayanan Kesehatan terutama pada akreditasi rumah sakit menjadi suatu hal penting dalam menjamin mutu layanan dan keselamatan pasien. Unit rekam medis memegang peran strategis dalam mendukung keberhasilan akreditasi karena fungsinya sebagai pusat informasi klinis dan administratif. Penelitian ini bertujuan untuk menganalisis tingkat kesiapan unit rekam medis dalam menghadapi pelaksanaan akreditasi berdasarkan standar STARKES 2024 di Rumah Sakit Umum Muhammadiyah Kota Cirebon.

Jenis Penelitian ini menggunakan pendekatan deskriptif kuantitatif dengan instrumen pengumpulan data berupa lembar observasi dan panduan wawancara terstruktur. Populasi dalam penelitian ini adalah seluruh petugas unit rekam medis. Penilaian akreditasi dilakukan terhadap 13 standar MRMIK menggunakan lembar checklist berbasis skala ordinal. Penelitian dilaksanakan pada bulan April hingga Mei 2025

Hasil penelitian menunjukkan bahwa dari keseluruhan standar MRMIK yang dinilai, sebagian besar kategori masuk dalam "Terpenuhi Lengkap" (>80%) dan sebagian lainnya "Terpenuhi Sebagian" (51%-75%). Skor tertinggi dicapai pada aspek keamanan data dan integritas informasi, sedangkan aspek pelatihan staf dan dokumentasi menunjukkan kekurangan bukti verifikasi.

Dapat disimpulkan bahwa unit rekam medis di RSUD Muhammadiyah Kota Cirebon memiliki kesiapan yang tinggi dalam mendukung pelaksanaan akreditasi. Implikasi dari temuan ini mendorong peningkatan berkelanjutan pada aspek-aspek yang belum sepenuhnya optimal agar pemenuhan standar akreditasi dapat tercapai secara menyeluruh.

**ANALYSIS OF PREPARATION OF MEDICAL RECORD UNIT IN  
IMPLEMENTATION OF ACCREDITATION OF MUHAMMADIYAH  
GENERAL HOSPITAL IN CIREBON CITY**

Xvii + 58 pages + 2 tables + 1 chart + 24 appendices

**ABSTRACT**

*In the era of digitalized healthcare services, hospital accreditation serves as a crucial instrument for ensuring service quality and patient safety. The medical record unit plays a strategic role in supporting the success of accreditation due to its function as the center for clinical and administrative information. This study aims to analyze the level of preparedness of the medical record unit in facing the implementation of accreditation based on STARKES 2024 standards at Muhammadiyah General Hospital in Cirebon City.*

*This research employed a descriptive quantitative approach using data collection instruments in the form of observation sheets and structured interview guides. The study population consisted of all personnel in the medical record unit. Accreditation assessment was conducted based on 13 MRMIK standards using a checklist instrument with an ordinal rating scale. The research was carried out from April to May 2025 at the designated location.*

*The results showed that among all MRMIK standards assessed, most categories were classified as "Fully Met" (>80%), while the rest were "Partially Met" (51%-75%). The highest scores were achieved in data security and information integrity aspects, whereas staff training and documentation showed a lack of verification evidence*

*It can be concluded that the medical record unit at Muhammadiyah General Hospital in Cirebon demonstrates a high level of readiness in supporting accreditation implementation. These findings imply the need for continuous improvement in aspects that are not yet fully optimized to achieve full compliance with accreditation standards*
