**KETEPATAN KODE DIAGNOSIS MORBIDITAS PADA REKAPITULASI
LAPORAN DI 4A RUMAH SAKIT PERMATA CIREBON**

5 Bab + 80 halaman + 4 tabel + 1 bagan + 11 lampiran

ABSTRAK

Pentingnya ketepatan kode diagnosis *Morbidity* dalam menunjang keakuratan dan ketepatan dalam menunjang pelaporan yang memiliki dampak signifikan terhadap perawatan pasien, pengelolaan data kesehatan, serta pengambilan keputusan medis yang tepat. Penelitian ini bertujuan mengetahui ketepatan diagnosis *Morbidity* pada rekapitulasi laporan 4A di Rumah Sakit Permata Cirebon.

Metodelogi pada penelitian ini deskriptif kuantitatif. Populasi pada penelitian ini adalah dokumen rekam medis pasien rawat inap pada bulan Oktober-Desember 2023 sebanyak 3900 berkas. Berdasarkan perhitungan rumus solvin didapatkan sampel sejumlah 98. Teknik pengambilan sampel menggunakan random sampling. Instrumen pada pengambilan data menggunakan lembar check-list.

Berdasarkan hasil penelitian ketepatan diagnosis *Morbidity* pada rekapitulasi laporan 4A di Rumah Sakit Permata Cirebon dari 98 berkas ketepatan kode diagnosa *Morbidity* sebanyak 70 dengan persentase 76,09% sedangkan ketidak tepatan Kode Diagnosis *Morbidity* sebanyak 28 dengan persentase 23,91%. ketidak tepatan tersebut dikarenakan tidak adanya kode morfologi karena tidak adanya kolom yang disediakan untuk mencantumkan kode morfologi dalam SIMRS.

Kesimpulan pada penelitian ini ketepatan diagnosis *Morbidity* pada rekapitulasi laporan 4A di Rumah Sakit Permata Cirebon dari 98 berkas ketepatan kode diagnosa kasus *Morbidity* sebanyak 70 dengan persentase 76,09%.

ABSTRACT

The importance of accurate Morbidity diagnosis codes in supporting accuracy and accuracy in supporting reporting which has a significant impact on patient care, health data management and appropriate medical decision making. This study aims to determine the accuracy of Morbidity diagnosis in the 4A report recapitulation at Permata Cirebon Hospital.

The methodology in this research is quantitative descriptive. The population in this study was 3900 medical record documents for inpatients in October-December 2023. Based on the Solvin formula calculation, a total of 98 samples were obtained. The sampling technique used random sampling. The instrument for collecting data uses a check-list sheet.

Based on the results of research on the accuracy of Morbidity diagnoses in the recapitulation of the 4A report at Permata Cirebon Hospital from 98 files, the accuracy of Morbidity diagnosis codes was 70 with a percentage of 76.09%, while the inaccurate Morbidity Diagnosis Codes were 28 with a percentage of 23.91%. This inaccuracy is due to the absence of a morphology code because there is no column provided to include the morphology code in SIMRS.

The conclusion in this study was that the accuracy of the Morbidity diagnosis in the recapitulation of the 4A report at Permata Cirebon Hospital from 98 files, the accuracy of the Morbidity case diagnosis code was 70 with a percentage of 76.09%.
