**ANALISIS KELENGKAPAN PENGISIAN SOAP PADA REKAM MEDIS
ELEKTRONIK RAWAT JALAN DI RUMAH SAKIT
PERTAMINA CIREBON**

xviii + 43 halaman + 1 bagan + 2 tabel + 12 lampiran

ABSTRAK

Kelengkapan formulir riwayat kesehatan penting karena memberikan informasi untuk pengobatan atau tindakan selanjutnya. Catatan perkembangan dapat menggunakan SOAP (Subjektif, Objektif, Analisis, dan Perencanaan). Tujuan penelitian ini untuk mengetahui analisis kelengkapan pengisian SOAP pada RME rawat jalan di Rumah Sakit Pertamina Cirebon.

Jenis penelitian ini menggunakan metode deskriptif dengan pendekatan kuantitatif. Dalam penelitian ini alat data yang digunakan yaitu dengan menggunakan lembar *checklist*. Cara pengumpulan data menggunakan observasi atau pengamatan. Sampel yang digunakan *random sampling* ini sebanyak 99 SOAP Rekam Medis Elektronik.

Berdasarkan hasil observasi kelengkapan pengisian SOAP di Rumah Sakit Pertamina Cirebon pengisian SOAP RME masuk kedalam kategori tidak lengkap masih belum sesuai dengan SPM Rumah Sakit yang menyatakan kelengkapan pengisian rekam medis elektronik harus 100%.

Hasil 37 SOAP rekam medis elektronik rawat jalan dengan presentase (37,4 %) dalam kategori lengkap dan 62 SOAP RME rawat jalan dengan presentase (62,6 %) tidak lengkap. Diharapkan pihak RS memberikan sosialisasi kepada PPA pentingnya kelengkapan pengisian rekam medis elektronik dan adanya pengembangan aplikasi RME yang mempunyai tingkat akurasi kelengkapan pengisian 100%.

**ANALYSIS OF THE COMPLETENESS OF SOAP FILLING IN OUTPATIENT
ELECTRONIC MEDICAL RECORDS IN THE HOSPITAL PERTAMINA CIREBON**

xviii + 43 pages+ 1 chart + 2 tables + 12 attachments

ABSTRACT

Completeness of the health history form is important because it provides information for further treatment or action. Progress notes can use SOAP (Subjective, Objective, Analysis and Planning). The aim of this research is to determine the analysis of the completeness of SOAP filling in outpatient EMR at Pertamina Cirebon Hospital.

This type of research uses descriptive methods with a quantitative approach. In this research, the data tool used is using a checklist sheet. The data collection method uses observation. The sample used for random sampling was 99 SOAP Electronic Medical Records.

Based on observations of the completeness of filling out the SOAP at the Pertamina Cirebon Hospital, filling in the EMR SOAP is in the incomplete category and is still not in accordance with the Hospital's SPM which states that the completeness of filling in electronic medical records must be 100%.

Results: 37 outpatient electronic medical record SOAPs with a percentage (37.4%) in the complete category and 62 outpatient EMR SOAPs with a percentage (62.6%) incomplete. It is hoped that the hospital will provide outreach to PPA about the importance of completing electronic medical records and developing an EMR application that has a 100% accuracy level in filling in completeness.

Keywords: Completeness, Outpatient SOAP, Electronic Medical Records
