**HUBUNGAN PENGETAHUAN TENTANG TRIASE DENGAN TINGKAT
KECEMASAN KELUARGA PASIEN DI IGD RS MITRA PLUMBON
INDRAMAYU**

xvi + 42 Halaman + 6 Tabel + 2 Bagan + 12 Lampiran

ABSTRAK

Latar Belakang : Instalasi Gawat Darurat merupakan instalasi yang menangani kondisi pasien sesuai kegawatdaruratannya dengan cara dilakukan pemilahan pasien berdasarkan berat cedera, yang mana proses tersebut dinamakan triase. Peningkatan jumlah kunjungan tiap tahun di IGD membuat proses triase sangat berguna terutama dalam melakukan pelayanan secara cepat dan tepat, selain untuk meningkatkan kualitas pelayanan didapatkan juga keluarga pasien yang mengalami kecemasan akibat kurangnya informasi mengenai sistem triase. Tujuan : Penelitian dilakukan untuk mengetahui hubungan pengetahuan tentang triase dengan Tingkat kecemasan keluarga pasien di IGD RS Mitra Plumbon Indramayu. Metode penelitian : merupakan jenis penelitian korelasi dengan model pendekatan *cross sectional*. Sampel dalam penelitian ini memiliki total 54 sampel dari 118 populasi. metode pengambilan sampel dengan Teknik non probabilitas menggunakan *accidental sampling*. Data diperoleh menggunakan instrumen penelitian kuisisioner Tingkat pengetahuan yang telah di uji validitas dan realibilitasnya serta kuisisioner HARS (*Hamilton Rating Scale for Anxiety*) untuk mengukur tingkat kecemasan. Hasil uji normalitas data ditemukan nilai data berdistribusi tidak normal dan dilakukan uji statistik menggunakan *spearman rank*. Setelah dilakukan uji statistik didapatkan hasil nilai signifikansi 0,001 dengan koefisien relasi 0,844 yang menunjukkan adanya hubungan pengetahuan tentang triase dengan Tingkat kecemasan keluarga pasien di IGD RS Mitra Plumbon Indramayu.

Kata Kunci : Pengetahuan, Triase, Tingkat Kecemasan

**THE CORRELATION BETWEEN TRIAGE KNOWLEDGE AND
ANXIETY LEVEL OF PATIENT'S FAMILY IN EMERGENCY
ROOM OF MITRA PLUMBON INDRAMAYU HOSPITAL**

xvi + 42 Page + 6 Table + 2 Scheme + 12 Enclousure

ABSTRACT

Background : Emergency Room is an Installation that handles patient conditions according to the emergency level by sorting patients based on the severity of their injuries, that process is called Triage. Increasing number of visit each year to the emergency room making the triage process very useful especially in providing services quickly and accurately, in addition to improving the quality of service, patients families also experience anxiety due to a lack of information regarding the triage system. Purpose : This study was conducted to determine the correlation between Triage Knowledge and Anxiety level of Patient's Family in Emergency Room of Mitra Plumbon Indramayu Hospital.

Methods : This study is a type of correlation research with a cross – sectional approach model. The sample in this study has a total of 54 samples from 118 populations. The sampling method with non – probability techniques using accidental sampling. Data were obtained using a research instrument, a questionnaire on the level of knowledge that had been tested for validity and reliability, as well as a Hamilton Rating Scale for Anxiety (HARS) questionnaire to measure the level of anxiety.

The results of the data normality test found that the data values were not normally distributed and a statistical test was carried out using Spearman Rank. After conducting statistical tests, the result obtained a significance value of 0,001 with a correlation coefficient of 0,844, which indicates a correlation between triage knowledge and anxiety leve of patient's family in emergency room of Mitra Plumbon Indramayu Hospital.

Keyword : Knowledge, Triage, Anxiety level
