**KETERSEDIAAN SARANA PEMBUANGAN SAMPAH DENGAN PERILAKU
MEMBUANG SAMPAH RUMAH TANGGA DI WILAYAH KERJA
PUSKESMAS SITOPENG KOTA CIREBON TAHUN 2023**

xix + 61 halaman + 4 tabel + 2 bagan + 21 lampiran

ABSTRAK

Sampah merupakan salah satu masalah lingkungan yang sudah menjadi masalah nasional bahkan global, bukan hanya lokal. Wilayah kerja Puskesmas Sitopeng merupakan Puskesmas yang berada di Kelurahan Argasunya memiliki sarana pengangkut sampah seperti gerobak sampah namun tidak dipergunakan untuk pengangkutan sampah, serta tempat pembuangan sampah pada setiap rumah kurang diperhatikan, seperti halnya wadah sampah atau tong sampah yang dianjurkan oleh pemerintah pada setiap rumah di Kelurahan sebagai sarana pembuangan sampah dimana setiap rumah tangga masih kurang karena belum semua memiliki. Penelitian ini bertujuan untuk mengetahui hubungan antara ketersediaan sarana pembuangan sampah dengan perilaku membuang sampah rumah tangga di wilayah kerja Puskesmas Sitopeng Kota Cirebon.

Desain penelitian yang digunakan yaitu *survey* dengan pendekatan *cross sectional*. Instrumen yang digunakan yaitu kuesioner. Jumlah sampel dalam penelitian ini sebanyak 98 responden. Penelitian ini dilakukan di wilayah kerja Puskesmas Sitopeng Kota Cirebon. Teknik pengambilan sampel yaitu *simple random sampling* menggunakan analisis univariat dan analisis bivariat dengan uji *chi square*.

Dari hasil uji statistik menggunakan uji *chi square* diperoleh $P Value = 0,001 (< 0,05)$ yang berarti H_0 ditolak atau H_a diterima menunjukkan ada hubungan yang signifikan antara ketersediaan sarana pembuangan sampah dengan perilaku membuang sampah rumah tangga di wilayah kerja Puskesmas Sitopeng.

Hasil penelitian ini diharapkan dapat mendorong peningkatan program sosialisasi tentang pengelolaan sampah rumah tangga.

**ASSOCIATION BETWEEN WASTE DISPOSAL FACILITY AVAILABILITY AND
HOUSEHOLD'S WASTE DISPOSAL BEHAVIOR IN THE WORKING AREA OF THE
SITOPENG PUBLIC HEALTH CENTER IN 2023**

xix + 61 pages + 4 table + 2 scheme + 21 enclosure

ABSTRAK

Garbage is one of the environmental problems that has become a national and even global problem, not just local. The work area of the Sitopeng Health Center is a Health Center located in the Argasunya Sub-District where transportation facilities are available, but such as garbage carts, as well as garbage disposal sites at each house are neglected, as are trash containers or trash cans which are recommended by the government for every house in the Kelurahan as a means of waste disposal where every household is still lacking because not all have. This study aims to determine the relationship between the availability of waste disposal facilities and the behavior of disposing of household waste in the working area of the Sitopeng Health Center, Cirebon City.

The research design used was a survey with a cross sectional approach. The instrument used is a questionnaire. The number of samples in this study were 98 respondents. This research was conducted in the work area of the Sitopeng Health Center, Cirebon City. The sampling technique is simple random sampling using univariate analysis and bivariate analysis with the chi square test.

From the results of statistical tests using the chi square test, P Value = 0.001 (< 0.05) which means that H_0 is rejected or H_a is accepted, indicating that there is a significant relationship between the availability of waste disposal facilities and the behavior of disposing of household waste in the working area of the Sitopeng Health Center.

The results of this study are expected to encourage an increase in socialization programs regarding household waste management.
