ABSTRAK

Pengembalian rekam medis adalah suatu proses pengembalian rekam medis dari unit pelayanan yang meminjam kembali ke unit rekam medis. Berkas rekam medis diharuskan sudah dikembalikan ke Instalasi Rekam Medis paling terlambat $\leq 2 \times 24$ jam setelah pasien pulang. Akibat terlambatnya pengembalian dokumen rekam medis terjadi penumpukan dokumen rekam medis rawat inap akhirnya menjadi beban petugas *assembling*. Tujuan penelitian ini untuk mengetahui Ketidaktepatan Waktu Pengembalian Rekam Medis Rawat Inap Di Rumah Sakit Umum Daerah M.A Sentot Patrol Indramayu.

Jenis penelitian yang digunakan adalah kuantitatif. Instrumen penelitian ini menggunakan lembar observasi. Populasi pada penelitian ini adalah seluruh berkas rawat inap yang keluar pada bulan Desember 2022 – Februari 2023 dengan jumlah 701 dokumen rekam medis rawat inap Sampel pada penelitian ini dengan jumlah 88 dokumen rekam medis. dengan menggunakan teknik *Simple Random Sampling*.

Hasil penelitian di Rumah Sakit Umum Daerah M.A Sentot Patrol Indramayu menunjukkan dari 88 dokumen rekam medis yang diteliti sebanyak 31 (35,3%) tidak tepat pengembalian rekam medis dan 57 (64,7%) tepat pengembalian dokumen rekam medis.

Berdasarkan hasil penelitian dapat saran bahwa petugas rekam medis dan perawat harus sering berkomunikasi terkait pengembalian rekam medis rawat inap agar meminimalisir terjadinya ketidaktepatan pengembalian rekam medis.

ABSTRACT

Medical record return is a process of returning medical records from the borrowing service unit back to the medical record unit. Medical record files are required to be returned to the Medical Records Installation no later than $\leq 2 \times 24$ hours after the patient is discharged. As a result of the late return of medical record documents, there was a buildup of inpatient medical record documents, which eventually became the burden of assembling officers. The purpose of this study was to determine the Inaccuracy of Inpatient Medical Record Returns at the M.A Sentot Patrol Indramayu Regional General Hospital.

The type of research used is quantitative. This research instrument uses an observation sheet. The population in this study were all inpatient files that came out in December 2022 - February 2023 with a total of 701 inpatient medical record documents. The sample in this study was 88 medical record documents. using the Simple Random Sampling technique.

The results of the study at the M.A Sentot Patrol Indramayu Regional General Hospital showed that of the 88 medical record documents studied, 31 (35.3%) were not appropriate for returning medical records and 57 (64.7%) were appropriate for returning medical record documents.

Based on the results of the study, it can be suggested that. Medical record officers and nurses must often communicate regarding the return of inpatient medical records in order to minimize the inaccuracy of medical record returns.
